1. Algoritma Brute Force untuk Word Search Puzzle

Setelah membaca word search puzzle dari file, grid word search akan disimpan dalam matriks karakter dan kata-kata disimpan dalam array string. Algoritma yang saya buat akan mengiterasi setiap kata dalam array tersebut, dan mencari setiap kata satu-per-satu. Untuk setiap kata, algoritma memeriksa karakter-karakter dalam grid word search mulai dari baris pertama kolom pertama, baris pertama kolom kedua dan seterusnya. Karakter-Karakter tersebut dibandingkan dengan karakter pertama dalam kata yang sedang dicari. Jika tidak sama, akan lanjut ke kolom atau baris selanjutnya. Namun, jika karakter sama dengan karakter pertama kata, algoritma akan lanjut ke pengecekan selanjutnya.

Sesuai aturan word search puzzle, kata dapat terbentuk ke semua 8 arah. Karena itu, algoritma mengecek mulai dari karakter di kiri atas karakter yang tadi ditemukan. Jika karakter di arah tersebut tidak sama dengan karakter kedua dari kata yang sedang dicari, maka pencarian akan lanjut ke atas, kanan atas, kanan, dan seterusnya ke semua 8 arah, sampai ketemu atau tidak ketemu dan balik ke pencarian karakter lain di grid.

Namun, jika karakter kedua tersebut cocok, algoritma akan melakukan pengecekan lebih lanjut ke arah di mana ditemukan karakter kedua tadi. Karakter selanjutnya akan diperiksa dan dicocokkan dengan karakter di kata yang dicari mulai dari karakter ketiga. Jika ada karakter yang tidak cocok, maka akan balik ke pencarian 8 arah yang tadi dilakukan, ke arah selanjutnya. Namun, jika karakter cocok, akan dilanjut pencocokan ke arah yang sama sampai semua karakter dari kata sudah dicocokkan. Jika semua karakter cocok, maka akan ditampilkan solusi kata tersebut dan algoritma diberhentikan.

2. Source Code (Dalam bahasa Java)

```
grid.add(new ArrayList<Character>());
gridRow = 0;
while (gridLoop) {
        gridLoop = false;
        if (lastNewline) {
            gridLoop = false;
             lastNewline = true;
             grid.add(new ArrayList<Character>());
             gridRow += 1;
        lastNewline = false;
        grid.get(gridRow).add((char) i);
System.out.println("\nWord Search Puzzle: ");
for (int j = 0; j < grid.size(); j++) {</pre>
    for (int k = 0; k < grid.get(j).size(); k++) {</pre>
        System.out.print(grid.get(j).get(k));\\
        System.out.print(" ");
    System.out.println();
boolean wordLoop = true;
StringBuffer buffer = new StringBuffer();
while (wordLoop) {
    wordLoop = false;
} else if (i == '\n') {
        words.add(buffer.toString());
        buffer.setLength(0);
    } else {
        buffer.append((char) i);
System.out.println("Words:");
for (int 1 = 0; 1 < words.size(); 1++) {</pre>
    System.out.println(words.get(1));
System.out.println();
